

TORQUE-CONTROLLED IMPULSE TOOLS

**Dimensions**

YETC-210EA 4-channel controller
with: YED-240S, System Wrench,
double solenoid control valves.

Target torques:

305 Nm

500 Nm

(also smaller System Wrenches
at this workstation)

In use by:

Manufacturer of industrial
robots in Germany.

Advantages for this customer:

The tightening data can now be
registered automatically. Also: no more
forgotten tightenings which, in case
of warranty or field services,
are very expensive.

The operator has no kickback in the
hand and the tool has good access even
to tight spots, because no support
(reaction-)arms are necessary.

Tightening applications on:

Assembly of robot-arms.

Conclusions:

- High accuracy of final torque
- All tightening data registered
- Flexible production process
